About Me

Currently contributing as a Software Team Member at **ITUNOM UAV Team**, focusing on enhancing object detection and tracking systems using YOLOv11 and YOLOv26 to advance UAVs' autonomous perception.

Leveraging expertise in Python, C++, ROS, and Gazebo, the team addresses real-world aerospace challenges. Additionally, developed a React-based team website to boost visibility, attract sponsors, and streamline processes.

Pursuing a Bachelor of Engineering in **Artificial Intelligence & Data Engineering** at **Istanbul Technical University**, with expected graduation in October 2028. Passionate about technology and committed to continuous learning, with competencies in tracking systems, full-stack web development, and object detection. Fluent in Turkish, English, and Arabic, with a goal to drive innovation in AI
